Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Target User: Student / Learner

The empathy map of EduGenie represents a student who wants to understand academic concepts clearly, learn a subject step by step, revise learning material efficiently and practise to check understanding. It reflects the three core problems identified earlier: difficulty understanding complex academic concepts, difficulty following a structured learning progression, and difficulty efficiently reviewing and practising learning content.

Note: The content of the canvas is a representative student perspective prepared for this empathy exercise. It is not based on survey or interview data.
