

## Project Executable Files

|                      |                                          |
|----------------------|------------------------------------------|
| <b>Date</b>          | 02 October 2026                          |
| <b>Team ID</b>       | 6ab7f31f8c7c66e70672939b                 |
| <b>Project Name</b>  | EduGenie – AI Powered Learning Assistant |
| <b>Maximum Marks</b> | 3 Marks                                  |

### Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

#### Step 1: Submission Checklist

| S.No | Item to Submit                                                  | Submitted (Yes / No / NA) |
|------|-----------------------------------------------------------------|---------------------------|
| 1    | Complete source code (all files and folders)                    | Yes                       |
| 2    | README / Setup Guide (instructions to run the project)          | Yes                       |
| 3    | requirements.txt / package.json / dependency file               | Yes                       |
| 4    | Database schema / seed files (if applicable)                    | NA                        |
| 5    | Environment configuration file (.env.example or similar)        | No                        |
| 6    | Deployed application URL (if hosted)                            | NA                        |
| 7    | APK / Executable binary (if applicable for mobile/desktop apps) | NA                        |
| 8    | Dockerfile / Containerization config (if applicable)            | NA                        |

|    |                                         |     |
|----|-----------------------------------------|-----|
| 9  | Test files and test results             | Yes |
| 10 | Demo video or walkthrough (if required) | Yes |

## Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
EduGenie/
├── main.py          - FastAPI application
├── explanation_module.py - Concept explanation logic
├── qna.py           - Question answering
├── quiz_module.py    - Quiz generation
├── summary_module.py - Summarization
├── learning_path.py  - Learning recommendations
├── templates/
|   ├── index.html    - Web frontend
├── static/
|   ├── style.css     - UI styling
└── requirements.txt  - Python dependencies
```

## Step 3: Deployment / Access Details

| Field                              | Details                          |
|------------------------------------|----------------------------------|
| <b>Hosted / Deployed URL</b>       | Not deployed – local access only |
| <b>Login Credentials (Demo)</b>    | Not required                     |
| <b>Platform / Hosting Provider</b> | Local / Uvicorn                  |
| <b>Repository Link</b>             | Not provided                     |
| <b>Demo Video Link</b>             | To be added                      |

## Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

Python 3.10+, internet connection, Google Gemini API key, and project dependencies.

Step 1: Open a terminal in the EduGenie project folder.

Step 2: Install dependencies: `python -m pip install -r requirements.txt`

Step 3: Configure the GEMINI\_API\_KEY environment variable. For the current demonstration, the Explanation functionality is configured to use Gemini 3.5.

Step 4: Start the application: `uvicorn main:app --reload`

Step 5: Open the application in a browser: `http://127.0.0.1:8000`

### Step 5: Known Issues / Limitations

| S.No | Known Issue / Limitation                                                                     | Workaround / Status                                                                              |
|------|----------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| 1    | LaMini-Flan-T5-783M local inference had high model loading and response time during testing. | For the current demonstration, the Explanation functionality is temporarily run with Gemini 3.5. |
| 2    | Gemini-based features require a valid API key.                                               | Set the GEMINI_API_KEY environment variable before starting the application.                     |
| 3    | The application is currently intended to run locally.                                        | Use Uvicorn and access <code>http://127.0.0.1:8000</code> . Deployment can be added later.       |
